

CONFIDENTIAL PSYCHOLOGICAL EVALUATION REPORT

Client Name: John Doe

Date of Birth: January 15, 1985

Date of Evaluation: December 18, 2024

Evaluator: Taylor AI, Licensed Psychological Assistant

I. REASON FOR REFERRAL

John Doe was referred by Dr. Emily Carter for a psychological evaluation to assess symptoms of anxiety and depression, which have reportedly affected his occupational and interpersonal functioning.

II. BACKGROUND INFORMATION

Family and Social History:

John is a 39-year-old male with no history of psychiatric hospitalization. He reports being married for 12 years with two children. He describes his childhood as "stable," though he noted periods of academic underperformance due to difficulties focusing.

Educational and Occupational History:

John holds a bachelor's degree in Marketing and works as a sales manager. He describes his work environment as "high-pressure," contributing to his recent stress.

Medical History:

John denies any chronic medical conditions but acknowledges occasional migraines, exacerbated during periods of high stress.

Substance Use:

John reports moderate alcohol use (1-2 drinks per week) and denies illicit drug use or smoking.

III. PRESENTING PROBLEM

John reports feelings of worthlessness, fatigue, and difficulties concentrating. He experiences persistent worry about performance at work and providing for his family. Symptoms have intensified over the past six months, accompanied by irritability and difficulty sleeping (4-5 hours per night).

IV. ASSESSMENT METHODS

1. **Clinical Interview**
 2. **Beck Depression Inventory-II (BDI-II)**
 3. **State-Trait Anxiety Inventory (STAI)**
 4. **Behavioral Observation**
-

V. ASSESSMENT RESULTS

Behavioral Observations:

John appeared cooperative and engaged during the session, though he displayed frequent fidgeting and avoidance of eye contact when discussing work-related stress.

BDI-II Results:

Score: 24 (Moderate Depression)

Interpretation: John's responses indicate notable depressive symptoms, including anhedonia and negative self-perception.

STAI Results:

State Anxiety Score: 45 (High)

Trait Anxiety Score: 42 (Moderate)

Interpretation: Elevated anxiety levels are consistent with reported work-related stress and generalized worry.

VI. DIAGNOSIS (DSM-5)

Primary Diagnosis:

- Generalized Anxiety Disorder (F41.1)

Secondary Diagnosis:

- Major Depressive Disorder, Moderate (F33.1)
-

VII. RECOMMENDATIONS

1. **Psychotherapy:** Begin weekly Cognitive Behavioral Therapy (CBT) to address negative thought patterns, improve emotional regulation, and develop coping strategies.
2. **Medication Referral:** Refer to a psychiatrist for evaluation of potential antidepressant use (e.g., SSRIs) to manage depressive and anxiety symptoms.

3. **Lifestyle Changes:** Recommend stress-reduction techniques, such as mindfulness meditation, and a regular sleep schedule.
 4. **Workplace Adjustments:** Suggest consulting with HR for possible workload accommodations or stress management training.
-

VIII. PROGNOSIS

With adherence to therapeutic interventions and lifestyle changes, John's prognosis is favorable. His insight and willingness to engage in treatment indicate a strong potential for improvement within 6-12 months.
